

# epiq reach

**Epiq is the global leader in legal services and technology. Our combined expertise, capabilities, technology-enabled solutions, and scale is unmatched in the industry. We help you manage your evidence and costs at every phase in the lifecycle of an arbitration, litigation, regulatory investigation or inquiry.**

## Our team of experts provides:

- Clarity, speed and efficiency in eDiscovery to meet your precise needs, from the simplest data collection to the most complex document reviews
- Exceptional legal support and dedicated client services teams to help clients solve their most difficult data challenges
- Rigorous security to keep your data safe

## Global reach

We are a global organization – with more than 80 offices spanning four continents, we are better positioned to meet our clients' needs, wherever they may arise. We have 14 data centers across the globe, giving you the local expertise, in-country data security and global reach you need.

## Consulting services

Our consulting team offers expert services in disclosure preparedness, litigation and practice support, records management, early case assessment (ECA), and information governance. We also have expert services available in law department strategy and technology planning and implementation.

## Artificial Intelligence and technology-assisted review

We deploy artificial intelligence and technology-assisted review (TAR) tools to help clients save money, meet deadlines, mitigate risk and increase consistency of document review projects.

**People. Partnership. Performance.**

### Document review services

We enable our corporate clients and their outside counsel to outsource the tasks associated with reviewing large document collections in an eDiscovery project. This may include interviewing and hiring qualified legal professionals for limited-duration document review work, developing document review protocols, sourcing office space and equipping it with secure workstations, training legal review professionals, providing guidance to the client's outside counsel throughout the review process, and providing project management services to ensure the review is efficiently run.

### Managed services

Managed services offers a holistic, enterprise-wide approach to eDiscovery. It eliminates the upfront costs of purchasing hardware and software. We provide every capability needed to reliably perform eDiscovery—software, hardware, people and processes—and the workflow management to make these capabilities work together. We work with our clients to design a managed service package to suit your capacity and workflow requirements at a fixed monthly cost.

### Court reporting and transcription services

Our skilled reporters deliver a range of flexible, affordable and accurate recording and transcription services. We provide high-quality realtime court reporting services for court hearings, arbitrations and depositions. In addition, we offer timely, accurate transcription services for meetings and audio recordings, as well as a full range of hearing room services.
